

## FIBALON® tool – Filtration of the 4th generation:

Our innovative, patented and awarded polymer fiber filter for the use in swimming pools, ponds and hot tubs are already setting new filtration standards. With the brand new and outstanding **FIBALON® tool** we define the filtration in the industrial sector new.

The use of filtration materials and systems in the field of industrial applications and the use of filter in the producing industries claim filter as well as filter systems on the highest degree. To meet these demands, we developed a special fiber combination for industrial applications. New fiber types with different surface modifications in a new combination, united in the innovative polymer fiber filter **FIBALON® tool**, offering unique and outstanding filtration results. By optimizing our developed dynamic fiber fixation **DyFix®** and a particle-dependent fiber geometry, we can now also offer our worldwide unique polymer fiber filter for the industrial use. Furthermore, we remain true to our principle: We do not use any adhesives and melt fibers and we are only use certified fibers according to the **ÖKO-TEXT Standard® 100**.

## FIBALON® tool – Best of industry award 2016:

All these new approaches were awarded by the first presentation of **FIBALON® tool** at the Hannover exhibition in 2016 with the „Best of industry
